

# Comparing content versions

In EPiServer CMS you can activate the compare view to see what has changed between versions for a specific content.

 Toggle the **Compare** button on the toolbar to activate the compare view, to see the versions side by side. It is possible to scroll and resize the panes.

Click the button again to turn off the compare view. It will also be turned off if you toggle view settings and preview, for example, a smart phone.

Work with an Alloy Technology partner to define the scale of your organization's needs and find the best fit with Alloy Plan.

## Viewing and editing versions

You can compare different versions by selecting a version to display from the left or right drop-down button in the compare toolbar. The draft will be shown in the left pane and the currently published version in the right. All language versions of the content are listed by default.

When you edit a published version in the left pane, a new draft will be created and shows in the version list. It works in a similar way as you edit content directly on the page, and when you are done, you can publish a draft, or republish a previous version.

## Comparing language versions when translating content

The current language will be selected in the language selector list, and you can filter the versions by language. You can compare versions made in the same language, or in different languages.

By comparing versions made in different languages, you can translate the content in the left pane side by side with the published version of the current language. You can also jump between languages to edit by selecting the current language in the version list of the left pane, and then switch language on the notification bar.
